Country roads.  
Scenic. Farmland.  
Peaceful.

## DANGEROUS.

Farmers depend on our highways while they grow our food and fiber, especially during the busy farming seasons like spring planting and summer/fall harvest.

### Use these tips to safely share the road:

#### What is an SMV sign?

SMV stands for slow-moving-vehicle. This sign must be displayed on all farm equipment designed to operate at speeds 25 mph or less when traveling on the road.

#### Farm equipment may use other safety alerts.

- Lights and reflectors positioned to the extreme left and right of their sides.
- Driver is using turn or hand signals.
- Reflector tape (usually white, silver or red).
- Using lights from sundown to sun up.
- An escort vehicle that may display a flashing, oscillating or rotating light or warning lights.
